

DOLOMITE SS 25

CAREZZA KNIT

Dolomite presents the perfect blend of style and sustainability: **Carezza Knit**. A lightweight and comfortable shoe, ready to take on whatever adventures the day brings.

In line with the “Re-source by Dolomite” corporate social responsibility programme, **Carezza Knit** is made using carefully selected recycled and bio-based materials. The upper is crafted from recycled mesh, making it lightweight and breathable with every step. The laces and sole are also made with certified recycled and bio-based materials. The lacing system distinguishes it from the original model, making it even more comfortable and ergonomic.

Every model in the **Carezza** line has been designed following thorough anatomical research, with the aim of offering total comfort combined with a light weight and high performance.

The midsole, with a contemporary and sporty look, is 30% made from recycled EVA and offers excellent shock absorption on all terrains. The tread, 15% made from organic components, features three different functional areas, highlighted by three different colours: one for grip and traction, one for flexibility and stability, and lastly, the central S-shaped channel, for lightness.

The women’s version of **Carezza Knit** was specially designed and made to provide a comfortable shoe specifically developed for the female foot.

Available in three colours for men and three for women.
